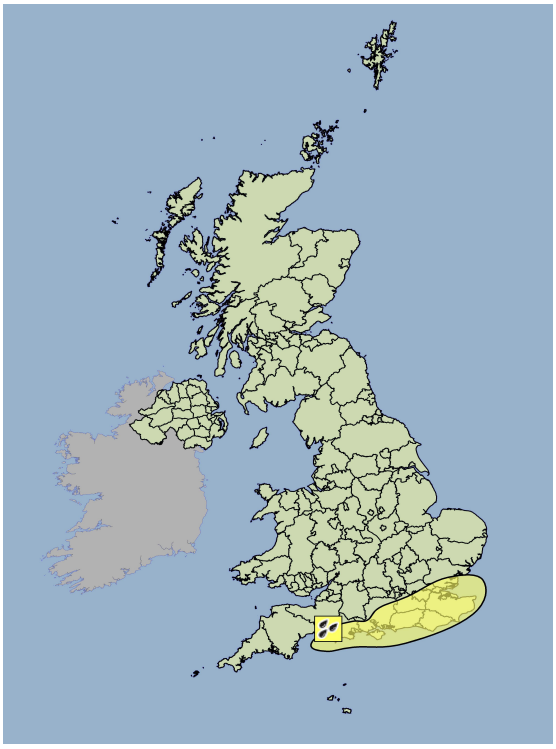
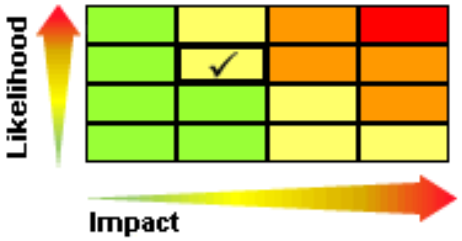
National Severe Weather Warning Service





Chief Forecasters Assessment
The next 36 to 48 hours will see bands of showers running into southern coastal counties and across the southeast of England in particular. These have the potential to produce intense bursts of rain, quickly leading to localised impacts given the saturated ground. Hail will be an additional hazard associated with some of the heaviest showers. It won't be raining all the time, with a significant drier interlude for some parts through the middle of Monday.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **08:40 on Mon, 06th Jan 2014** until **23:59 on Tue, 07th Jan 2014**

Heavy showers, some of them combined with hail and thunder, will continue to affect parts of southern and southeastern England at times through the rest of Monday and Tuesday. The public should be aware of the risk of further localised flooding.
